

Dear Madam or Sir,

Having eight years of full stack web development experience including three years of professional work experience I am confident to meet the requirements and deliver excellent results. Besides that, majoring in web development in Berlin my expertise could not be more fitting for the job.

My studies combined with my work experience enabled me to develop a wide range of skills from front-end to back-end engineering including:

- excellent proficiency in front-end web development using in HTML5, CSS3/SASS and Javascript including libraries and frameworks such as Angular, jQuery, Bootstrap
- strong skills in back-end development through NodeJS, Python and PHP using MySQL, Express and others
- experience in object-oriented programming (C++) and functional programming (Haskell) through studying computer science
- solid understanding of REST APIs and how to use them

Work and real life projects during my studies taught me to justify design decisions with the clear factual benefits rather than just aesthetics and to communicate and explain technical decisions to others in a simple way.

To solve problems I constantly have an eye on new technologies and try to improve myself by learning valuable skills. That way of pragmatically developing modern solutions makes me equipped to support ServiceNow in progressing towards their goal.

Thank you for your consideration.

Sincerely,

Philip Drozd
